Dear Jim,

Thanks very much for purchase the program SEMscan 3.0 Pro.

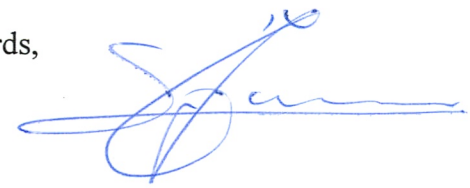
It was for me a real pleasure to cooperate together with you, especially how we work things out over e-mail gives me a kick. Step by step we solve all the problems and get to the target we wanted (you also can be proud on your self).

Also important is the friendship which left over between us is a nice side effect of this project (how more friends, how better the world). Therefore if you have any questions or planning's and need some answers or advice, please don't hesitate to ask me (just send me an e-mail any time you want).

My friends are also interested in the work you do, one friend are a science and teacher on the University of Eindhoven and is world famous about the research of all kind of crystals and the other friend was teacher in materials on a high school in or town, he retired a few years ago and has a big laboratory at home with 2 electron microscopes and many more. Every Saturday we stay together in his laboratory and are busy with all kind of science, even many years ago we grown robins and diamonds so big as a finger. My friend who has the laboratory is interested in how you make good biologic samples for the SEM because he has only experience with materials (perhaps you can give some advice).

My self: my whole life I was interested in all kind of science, in the past I design and build telescopes and space camera's including I make the optics, CNC Robot machine and other robots, design all kind of computer hardware and write programs. My main job in the past was industrial designer and project leader for car industry and work international. During that time I also visit a few times USA and once I make a TV commercial for US market in Miami. I live for a few years in Taiwan capital city Taipei and meet my little wife there, after a lot of screening I get permission to marry her on a traditional Chinese way. The screening was necessary because her family has high-ranking positions in the government. At the moment I work on a high-school as computer engineer, it's a heavy job to keep things running with students which like to test you all the times with hacking and cracking, but it is also a challenge for me to make it more and more difficult for them.
And now back to the program, I make all the adjustments for you so after you install the program, it should work directly, first push the photo button of your SEM and then the scan button of the program, wait 80 sec and you get your picture (use the Help button in the program).

With kind regards,



Jan W.H. Vaessen
